PyCitySchools

When looking that the data there are multiple conclusions you can come to, but there are two that stand out the most to me. The first one is that no matter what school you look at reading is always the highest percentage pass. For instance, when looking at Huang High School, a district school, we see a 15.63% increase between math and reading passing rates. This trend continues into charter schools like Thomas High School with a 4.03% increase in passing rates. The second conclusion that stood out to me was that Cabrera High School, a charter school, achieved a 95.58% passing rate. This stood out because this school had the second lowest budget of $582.00 per student. Using this budget per student we could lower all charter schools to meet this rate per student, and the expenses saved could be applied to our district schools.
